With the AC amplifiers connected as recommended in Figure 6, and for amplifiers whose connections are specified in Table IX and the oscillator frequency at 800 cps ±1 percent, the oscillator output amplitude shall be increased until clipping occurs and then decreased until clipping is no longer visible, the voltage at this point shall be greater than 5.5V rms. For the amplifiers whose connection are shown in Table X, the testing shall be the same except the input level at which clipping is no longer visible shall be greater than 31V rms. With the supply voltage decreased to 24.5 vdc, the input levels that produce clipping shall be greater than 5V rms and greater than 28V rms respectively.

4.3.6.2 Gain. For amplifiers whose connections are shown in Table IX and as recommended in Figure 6, the oscillator output at 0.15, 0.35, 0.55, 0.75, 1.5, 2.5 and 5.0V rms ±1 percent 800 cps ±1 percent, the gain (E_{out}/E_{in}) shall be 0.99±0.01 volts/volt for each magnitude of oscillator output voltage. For the amplifiers whose connections are shown in Table X, the testing shall be the same except the test shall be at 800 cps ±1 percent, the gain shall be 0.18 volt/volts ±1 percent with an input of 28V rms ±1 percent. Read and record all gain values to a minimum of 3 significant places to the right of the decimal point.
